

# System & Data Integrations

As enterprise IT demands expand and become more complex, system & data integration is becoming increasingly significant and one of the main requirements for business progress.

Leverage the extra value ThirdPartyTrust can add to our customers with powerful integrations.

## SYSTEM INTEGRATIONS

System integration brings different programs together to work smoothly without interfering with each other or demanding duplicate actions from the users, so that data can flow seamlessly and uninterrupted.

Imagine all you can do by integrating your vendor risk management platform to your current operation!

With the use of fully accessible **APIs**, your third party risk assessment data can be integrated into a wide variety of systems, such as:

- ✓ **GRC platforms** like ServiceNow or RSA Archer
- ✓ **Ticketing systems** like JIRA or ServiceNow
- ✓ **Reporting solutions** such as Power BI or Qlik

### BENEFITS

01.

#### Increase Your Overall Productivity

Cut the time spent on repetitive actions across applications and minimize errors, thus increasing your company's productivity.

02.

#### Get Better Data to Make Decisions

Gain a holistic understanding of how well your business is doing and make data-driven risk management decisions.

03.

#### Lower Operational Costs

Cut maintenance costs significantly, simplifying and automating processes across systems and avoiding unnecessary downtime.

Integrating ThirdPartyTrust to your current system is an excellent alternative to custom software development which will significantly improve the efficiency, productivity and quality of your everyday operations and your TPRM process.

## DATA INTEGRATIONS

ThirdPartyTrust empowers our customers to explore and utilize the best partners in our ecosystem to drive value at every stage of the assessment process.

We've partnered and integrated the most innovative and expert so you can harness the power of our platform to detect compliance and risk issues across your vendor population.

Take advantage of ThirdPartyTrust's data partners by integrating their information in your third party risk assessments and using it to make data-driven decisions.

### BENEFITS

01.

Improve vendor risk assurance with security-driven workflows and executive reporting, combining our partners' cybersecurity data.

02.

Leverage data provider information to add context to inherent risk tiers for more improved vendor selection and assessments.

03.

Use independently verified scores for objective, verifiable findings around your organization's cybersecurity performance - or that of your vendors.
